I request that you reject Petition 04-160 and continue to support the free market system. Satellite Radio allows the consumer to make their own decisions regarding the types of music and information they would like to receive. Traffic and weather is a prime example of the service. XM provides continuous updates of traffic and weather, I do not have to wait on the 2's, 5's or what schedule that the local broadcasters deem warranted. I drive quite a bit on company business and need to have constant updates of traffic situations in order to make adjustments in my planned route and schedule. Please continue your support of the free market system by allowing satellite radio to provide services not currently available in the market.
